

**IN A WORLD WHERE DRONES ARE USED TO
SURVEY AND GATHER VAST AMOUNTS OF
DATA, WE ARE HERE TO HELP.**

CANA OPERATIONS LOGISTICS MODULE (COLM)

*Optimizing your drone fleet operations asset planning with
instant, accessible life-cycle management workflow
functions from beginning to end.*

Built on a **Cutting Edge** drone operating system, CANA Advisors is proud to provide the commercial Unmanned Aerial System (UAS) service providers the only asset management and operations planning solution fully integrated into a drone command and control system.

COLM provides fleet logistics asset management, optimizes drone operations, streamlines workflows, and ultimately, increases mission flexibility.

Fleet Logistics Asset Management

- Organize, track, and manage valuable assets (*platforms, equipment, and personnel*) from small scale operations to enterprise level fleets.
- Aggregate all assets on COLM's flexible cross-functional interface including fixed and rotary wing platforms.
- Manage and track equipment life-cycle maintenance for platforms, sensors, batteries and other equipment.

Operations Planning

- Build teams aligned to assets optimizing work performance on projects.
- Create and manage projects, work orders, and daily tasks for visibility and status.

Workflows

- Generate customer ROI by automatically generating optimized daily task lists for team assignments of unscheduled work orders.
- Import work orders from other systems or create your own; COLM provides the flexibility to manage at different levels.
- Fully integrated on a cutting edge drone operating system to automatically generate drone mission plans based on the work orders – no re-keying of data!

COLM is a premier module within the DreamHammer® DroneOS platform, and the only tool on the market that provides an asset management and optimized operational planning capability integrated with the world's premier drone command and control system.

CUSTOMIZED FEATURES

- Options to support diverse drone fleet logistics and maintenance mission requirements
- Precision work flows to support work order management from creation to close out
- Optimized for simplified scheduling and management of teams
- Easy to use interfaces for data input and analytics
- Fully integrated with a state of the art cutting edge drone operating system
